Re: Post-Flood Mitigation Moisture Inspection
3315 Lost Hollow Dr, Kingwood, Texas 77339
MEC^x Project No. # 1575.001C.01

Dear Ms. Bordelon

MEC^x, Inc. (MEC^x) performed a moisture assessment of the first floor living space at the above-referenced property (Site) on 22 October 2019. Mr. Jordan Bowes, a Texas Department of Licensing and Regulation (TDLR) licensed Mold Assessment Technician (MAT1294) performed an assessment of the first floor living space at the under the responsible care of Matthew Haak, a TDLR-licensed Mold Assessment Consultant (license number MAC #0218).

The purpose of the moisture assessment was to determine the extent of remaining building materials, if any, affected by flood waters resulting from Tropical Storm Imelda which caused flooding at the Site on or about 19 September 2019.

FLOOD WATER QUALITY

According to the United States (U.S.) Environmental Protection Agency (EPA), flood waters resulting from hurricanes, tropical storms, rising rivers or tsunamis may be significantly more affected than flood waters from clean sources (i.e., potable water or rainwater that leaks into buildings). Flood water can be classified as gray water or black water. Descriptions of gray water and black water are as follows:

- Gray water contains a significant level of contamination and has the potential to cause discomfort or sickness if consumed by or exposed to humans. Gray water can carry microorganisms and nutrients for microorganisms. Examples of gray water causes include sump pump failures, seepage due to hydrostatic pressure or floodwater, broken aquariums or overflows from washing machines and dishwashers.
- Black water contains sewage and other contaminated water sources entering or afflicting the indoor environment. Such water sources can carry silt/organic matter into structures and create black water conditions. Toilet backflows that originate from beyond the toilet trap and contaminated floodwaters are often considered black water, regardless of the physical content or color of the water. Black water can contain pathogenic agents and is grossly unsanitary.

Given the widespread nature of the flood resulting from Tropical Storm Imelda and the associated sewer backflows/surcharge, MEC^x considers these flood waters as black water.
