

## Pest-Tubes® Installation

 Duty Systems, LP installs Pest-Tubes® which provides the latest technology for insect pest control, helping prevent insects and other pests from entering into your home.

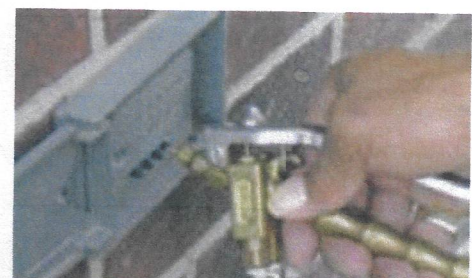

The Pest-Tubes® are expertly installed into new, under construction homes in the Greater Houston Texas area, including Katy, The Woodlands, League City, Friendswood, Pearland, Galveston, Sugar Land, North West Houston, Spring, Conroe, Montgomery and points in-between. We service all types and brands of Pest Tube systems in the greater Houston, Texas area .

## How the Pest Tubes Work

**Pest-Tubes®** is a centralized pest control delivery system. A polyethylene tube is installed just above the base plate in the perimeter walls in the first story locations, and also in other "wet" locations in your home, such as kitchen, bath and laundry rooms.

The **Pest Tubes®** have evenly spaced outlets which facilitate the distribution of the pest control products throughout each tube's length. The Pest-Tubes installation also features "solid tubing" or full length runs, so there are no splices in the walls.

The **Pest-Tubes®** system provides pest control without the need for chemicals to be sprayed inside your home, creating a “Low Impact” of pesticides inside. This provides a safer environment for you, your children and pets. This also virtually eliminates all chemical odors and negates the need for a service person to go into the home spraying chemicals, opening cabinets, accessing kitchen storage areas, moving furniture and entering closet areas.

Servicing the Pest-Tubes® system is performed by trained and licensed technicians that inject the product into the tubing system by accessing a small pre-installed service port located on the outside of your home. The service is normally once every three (3) to four (4) months. We also treat your exterior perimeter and eaves to control spiders, ants, roaches and other insects wanting to gain access to your home.

If you are interested in us installing Pest Tubes® in your new home, please call us at 713-358-7589 and schedule with your construction GM for us. We need about a four (4) day lead time. If you like, have your builder call us directly.
