## PROJECT DESCRIPTION

The Brays Bayou Federal Flood Damage Reduction Project, known as Project Brays, is the largest flood damage reduction program undertaken by the Harris County Flood Control District to date.

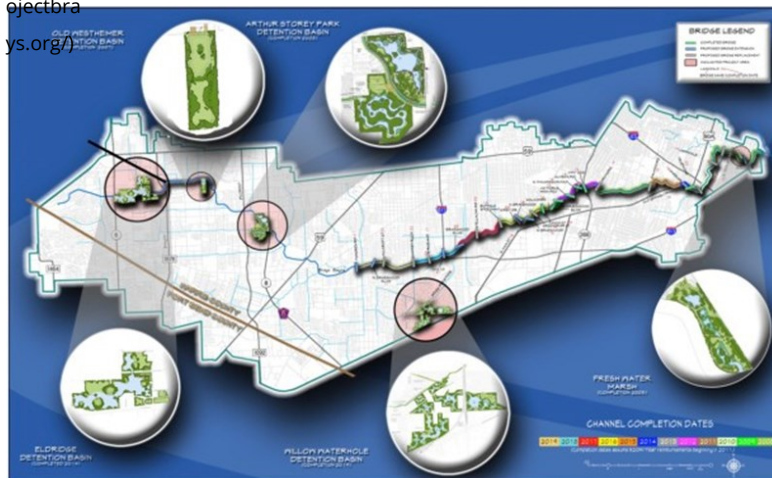

A cooperative effort between the Flood Control District and the U.S. Army Corps of Engineers (Corps), Project Brays is an active multi-year, \$480 million project that substantially reduces flooding risks in the Brays Bayou watershed. It is the largest partnership project the Flood Control District and Corps have conducted to date.

Encompassing more than 75 individual project components, Project Brays will help to reduce flooding risks by widening 21 miles of Brays Bayou from the Houston Ship Channel to Fondren Road and from West Houston Center Boulevard to State Highway 6, replacing or modifying 32 bridges (including two pedestrian bridges) to accommodate channel modifications and excavating four stormwater detention basins that will hold a collective 3.5 billion gallons of stormwater.

### Progress On Project Brays

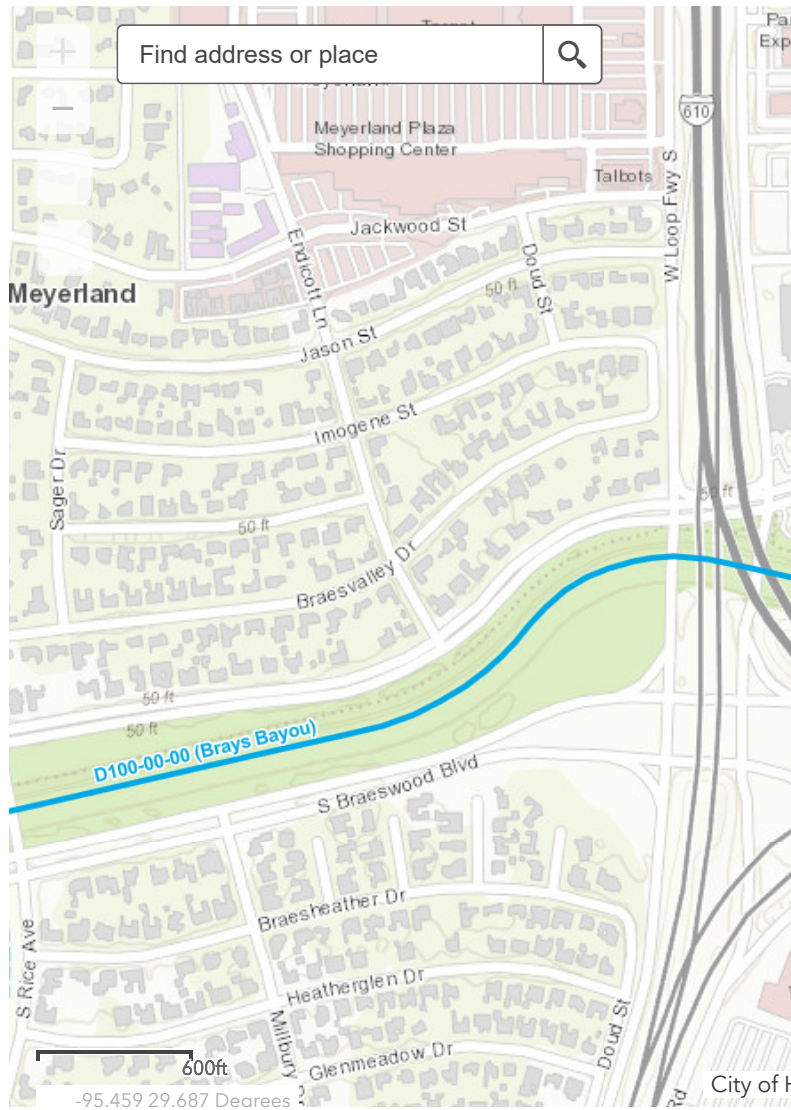

Get more detailed information and up-to-date progress on Project Brays  
(<https://www.projectbrays.org/>)

The Harris County Flood Control District has a significant number of flood damage reduction projects occurring all over Harris County as part of its on-going Capital Improvement Program (CIP), Operations and Maintenance, and the 2018 Bond Program. Click on the red and orange highlighted areas to learn about projects' details. Some early-stage projects are not highlighted in the map. The map will be updated when projects advance or when more information becomes available.
