

3611 Tamfield Dr, Harris County, Texas

3611 Tamfield Dr, Harris County, Texas

FEMA Zone (est.): X Flood insurance: recommended ⓘ

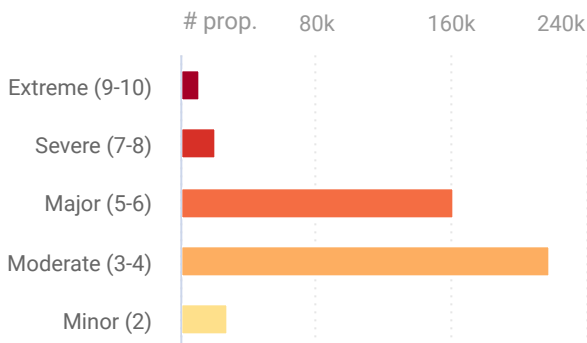

This property has minimal flood risk.

This property has a **Minimal Flood Factor™**. Although flood risks across the country are changing because of the environment, this property is unlikely to flood over the next 30 years.

Proportion of properties at risk in Harris County

438,963 / 1,421,685 30%

Distribution of properties at risk by Flood Factor in Harris County

SCORE MAP

Flood Factors across this area.

A property's Flood Factor is an indicator of its comprehensive flood risk, as determined by its **likelihood** of flooding and the potential **depth** of that flood.

Properties with higher Flood Factors are more likely to flood, more likely to experience high floods, or both. [Learn more about Flood Factor scores.](#)

Filter properties by Flood Factor:

- All
- Minimal (1) Major (5-6)
- Minor (2) Severe (7-8)
- Moderate (3-4) Extreme (9-10)

FLOOD DEPTH EXPLAINED

Even a little flooding can damage a building. ⓘ

It may not seem like a lot, but just an inch of flooding on the first floor can cause major damage to a property and belongings and spur mold growth.

Major flood events are less likely to occur than smaller, more frequent events, but have a greater capacity for damage. If water reaches a building, the amount of damage, if any, will depend on the building's elevation and foundation.

This year In 15 years In 30 years

Flooding likelihood	0.2%	1%	5%	20%	50%
Water to building	0 ft	0 ft	0 ft	0 ft	0 ft

0 0.5 1 2 3+

Depth of flooding (feet)

📍 2020
📍 2050

In **2020** , it is **0.2% likely** that **0 ft** ft of water will reach the largest building on this property.

ENVIRONMENTAL CHANGES

Flood risks are changing because of the environment.

A changing environment means higher seas, new weather patterns, and stronger storms. As the atmosphere warms, there is more evaporation and more water
