

## 2015 International Energy Conservation Code Compliance Form

The City of Pasadena Permit Department currently requires compliance with the International Energy Conservation Code, per State of Texas law mandating the same.

This form must be signed by a Certified Professional in the 2015 International Energy Conservation Code.

A cover and final energy inspection form will be provided to the builder, and a FINAL must be provided to the Permit Department for review and approval. The Building Permit Department will not allow occupancy to take place prior to satisfying this requirement.

The 2015 IECC governs any structure that has utility services. This includes all permitted building, electrical or mechanical projects with new construction, additions, remodels or change of occupancy that will affect the energy load.
