

- This is a multi-year, regional trail project whose objective is to construct a concrete trail connection between the existing Addicks Reservoir Bike Trail to the west and the White Oak Bayou Greenway to the east.
- The project uses an existing CenterPoint easement as its primary alignment.
- The trail connection in Spring Branch alone is more than 7-miles in length.
- Numerous schools, parks and neighborhoods will have direct, convenient access to the Spring Branch Trail.
- The project will also develop strategic, multi-modal connections to the wider Spring Branch community, and consider the Houston Bike Plan.

SPRING BRANCH TRAIL STUDY
