HERS Index - Home Energy Rating System (HERS) <http://www.resnet.us/home> is a nationally accepted method used by lenders and energy efficiency programs to evaluate a home's energy efficiency. Based on a scale of 0-100, the lower the HERS rating, the more energy efficient the home and less cost to operate. The HERS Rating is calculated on the base floor plan design and does not include additional optional rooms or other modifications whether added by the Builder or Buyer.

Plans, specifications and prices are subject to change without notice, and may vary by community. Corner, Cul-de-sac and oversize lots are at a premium price. Square footage is approximate and may vary by exterior elevation. Seller agrees to make a financial contribution to Purchaser's fees connected with securing a mortgage and closing a home through Seller's selected lenders and title companies only.
