## Equipment Required

To achieve a labeled R-value, this product must be applied with a pneumatic blowing machine and a corrugated hose with minimum .25" internal corrugation, a minimum length of 150 ft. and a diameter of at least 3". Coils in the hose should not be less than 36" in diameter. Acceptable material feed rate is 5-35 lbs./minute. Recommended feed rate is 12-25 lbs./minute.

## Thermal Performance (Attic Application)

The stated thermal resistance (R-value) is provided by installing in accordance with the manufacturer's instructions, the required number of bags per 1,000 sq. ft. of net area, at not less than the labeled minimum thickness. Failure to install both the required number of bags and at least the minimum thickness will result in lower insulation R-value.

R-Value*	Bags/ 1,000 SF	Maximum Coverage	Minimum Weight	Initial Installed Thickness	Minimum Settled Thickness**
To obtain an insulation resistance (R-Value) of:	The number of bags/1,000 SF of net area should not be less than:	Contents of this bag should not cover more than:	The weight/SF of installed insulation should not be less than:	Installed insulation should not be less than:	Installed insulation should not be less than:
R-80	31.7	31.5 SF	952 lbs.	19.75"	19.75"

Bag Net Weight—Nominal 30 lbs., Minimum 29 lbs.

Coverage and installation data were determined using a Volu-Matic® II blowing machine in third gear with 10" gate opening, 12 psi air pressure and 1/2" of .25" internally-corrugated hose.

This product conforms to the performance requirements of ASTM C 764, Type I, and cancelled Federal Specification HH-I-1030B, Type I, Class B.

R-values are determined in accordance with C 687 and C 518.

\*"1" means resistance to heat flow. The higher the R-value, the greater the insulating power. To get the labeled R-value, it is essential that this insulation be installed properly. If you do it yourself, get instructions and follow them carefully. Instructions do not come with this package.

\*\*Based on Third Party 2-year settling study, the predicted settlement over a 20-year period would be 1 part in 10 less. This amount of settling is thermally insignificant. Therefore, the installed and settled thicknesses are effectively the same.
