

17407 Cricket Mill Dr.

Smart Home Features

This home has smart home features controlled through an app: lights, door locks (front and back) & both garage doors can be opened/closed through the app. Currently the outside front door light and outside garage door lights are set to go on and off automatically at sunset and sunrise. The back door light can also be added to it as well.

There is a 16 camera system with remote access through an app on your phone. There is also an Ipad in the living room wall to view cameras from.

The doorbell camera ties into the NVR and records to the camera system. It also has a micro-SD card that records to itself, Doorbell camera also uses the same app as the camera system.

There is an alarm system installed with cellular backup that just needs service activated.
