

## Overview of this Closet

The rack houses the following items that will stay if the rack stays:

- Patch Panel (top item) that has multiple Cat 5 Cables running to every spot there is a TV (behind each TV). This allows hard wiring every TV to the internet rather than connecting wirelessly.
- TP Link Switch Below Patch Panel
- Both Onkyo Receivers – connected to Living Room 5.1 and Bar 7.2 surround speakers
  - Each TV in Bar area feeds into the Media Room Receiver meaning each TV can feed the speakers
  - Sonos Connection to both receivers meaning Sonos (housed in wall cabinet) can be played on surround speakers
- Both Velodyne Amps
- NUUO Storage Device for outside cameras
- UPS

The house is wired with over 6000' of Cat 5e Cable. There are multiple cable drops into every room and some outside locations (back patio, garage). The infrastructure is present for a whole home control system (e.g. Control4) to be installed without the need to pull additional cabling.

**If desired, we can remove the rack and all components and turn this back into a normal closet.**
