

About the Builder

b2 housing group llc

b2 housing group llc, was established in Houston, Texas as an expansion of n.design international from Barcelona, Spain.

Since 2006 we have been successfully designing and building multi-million residential projects in Houston TX. In 2014 b2 housing opened its West Coast branch in California, focusing on redefining the concept of upscale contemporary metropolitan living by designing and building luxury homes in prestigious neighborhoods of Los Angeles, Hollywood and Beverly Hills.

The company has more than 20 years of local and international experience in developing land, residential construction and commercial projects, interior design, decor and remodel.

We strive to be a trend-setter in the ever-changing real estate market, always offering top products and the latest features while at the same time caring for the environment.

we build human-friendly

Due to the lack of regulations in the U.S., many materials conventionally used in construction are highly toxic and will off-gas during their life-span posing serious threat for human health.

Even the "green building" label - while ensuring safety for the environment and energy-efficiency - does not entail safety for human occupants.

We are excited to be pioneers in **non-toxic construction** and offer our clients a superior quality product: homes which protect the health of their family.

museum-worthy design

Cookie-cutter is never an option. With every project we aim to bring truly unique design to our customers.

Our signature Colquitt City Homes were featured by The Art Institute of Houston in the [Modern Home Tour](#)

smart homes made smarter

With the rapid and constant technological development "smart-home" is an ever-evolving category. What made sense yesterday is outdated today.

We change with the world, so do our homes.

Always keeping our ears to the ground, we explore and study the latest devices, finishes, automation, lighting and design ideas to make all living environments, not only more aesthetic but functional, comfortable and efficient.
