Re: Wesley Hinton

1510 Heartwood Drive Conroe, TX 77384 File #: 3353897

The following summary highlights items with regard to the above referenced property. Please read the attached report(s) for additional details.

#### **WDI/Termite Inspection**

#### **Clear - No Treatment Needed**

Any and all defects noted in the attached reports should be repaired as soon as possible to prevent further deterioration and to restore the components to serviceable condition. All defects should be examined by qualified contractors and/or licensed design professionals to provide estimates and recommendations for repairs. In many cases, the full extent of a defect is not known until repair work has started. This report is not considered a guarantee of future conditions and no warranty is implied. The attached report(s) has/have been prepared for the exclusive use of our client. This report is neither a representation of lender requirements nor is it a representation of the marketability or insurability of this property.

If you have any questions or need further information on this file, please call our National Service Center 800-231-1301.

TEXAS OFFICIAL WOOD DESTROYING INSECT REPORT

Rule §7.176 Requires this department prescribed form to be used for real-estate transactions in Texas regarding the visible presence or absence of wood destroying insects and conditions conducive to infestations of wood destroying insects.

1510	Heartwood	Dr	Comoe	77384
1310	Inspected Address		City	Zip Code
	inspected riddless	SCOPE OF	INSPECTION -	* 1000000000000000000000000000000000000

- A. This inspection covers only the multi-family structure; primary dwelling or place of business. Sheds, detached garages, lean-tos, fences, guest houses or any other structure will not be included in this inspection report unless specifically noted in Section 5 of this report.
- B. This inspection is limited to those parts of the structure(s) that are visible and accessible at the time of the inspection. Examples of inaccessible areas include but are not limited to (1) areas concealed by wall coverings, furniture, equipment and stored articles and (2) any portion of the structure in which inspection would necessitate removing or defacing any part of the structure(s) (including the surface appearance of the structure). Inspection does not cover any condition or damage which was not visible in or on the structure(s) at time of inspection but which may be revealed in the course of repair or replacement work.
- C. Due to the characteristics and behavior of various wood destroying insects, it may not always be possible to determine the presence of infestation without defacing or removing parts of the structure being inspected. Previous damage to trim, wall surface, etc., is frequently repaired prior to the inspection with putty, spackling, tape or other decorative devices. Damage that has been concealed or repaired may not be visible except by defacing the surface appearance. The WDI inspecting company cannot guarantee or determine that work performed by a previous pest control company, as indicated by visual evidence of previous treatment; has rendered the pest(s) inactive.
- D. If visible evidence of active or previous infestation of listed wood destroying insects is reported, it should be assumed that some degree of damage is present.
- E. If visible evidence is reported, it does not imply that damage should be repaired or replaced. Inspectors of the inspection company usually are not engineers or builders qualified to give an opinion regarding the degree of structural damage. Evaluation of damage and any corrective action should be performed by a qualified expert.
- F. THIS IS NOT A STRUCTURAL DAMAGE REPORT OR A WARRANTY AS TO THE ABSENCE OF WOOD DESTROYING INSECTS.
- G. If termite treatment (including pesticides, baits or other methods) has been recommended, the treating company must provide a diagram of the structure(s) inspected and proposed for treatment, label of pesticides to be used and complete details of warranty (if any). The warranty should specify which areas of the structure(s) are covered by warranty, renewal options and approval by a certified applicator in the termite category. Information regarding treatment and any warranties should be provided by the party contracting for such services to any prospective buyers of the property. The inspecting company has no duty to provide such information to any person other than the contracting party.
- H. There are a variety of termite control options offered by pest control companies. These options will vary in cost, efficacy, areas treated, warranties, treatment techniques and renewal options.
- There are some specific guidelines as to when it is appropriate for corrective treatment to be recommended. Corrective treatment may only be recommended if (1) there is visible evidence of an active infestation in or on the structure, (2) there is visible evidence of a previous infestation with no evidence of a prior treatment.
- J. If treatment is recommended based solely on the presence of conducive conditions, a preventive treatment or correction of conducive conditions may be recommended. The buyer and seller should be aware that there may be a variety of different strategies to correct the conducive condition(s). These corrective measures can vary greatly in cost and effectiveness and may or may not require the services of a licensed pest control operator. There may be instances where the inspector will recommend correction of the conducive conditions by either mechanical alteration or cultural changes. Mechanical alteration may be in some instances the most economical method to correct conducive conditions. If this inspection report recommends any type of treatment and you have any questions about this, you may contact the inspector involved, another licensed pest control operator for a second opinion, and/or the Structural Pest Control Service of the Texas Department of Agriculture.

### **National Residential and Environmental Inspections**

# Reporting Disclaimer – Indoor Air Quality (Moisture Intrusion / Fungal Growth)

Testing and/or inspecting of indoor air quality is outside the parameters of this inspection. Unless explicitly and individually contracted for and separately reported, GlobeSpec has not performed any inspections or testing for the presence or absence of indoor air pollutants.

The report may contain, for informative reasons only, the notation of visible moisture intrusion/fungal growth or conducive conditions to moisture intrusion/fungal growth. Those who wish further testing and evaluations are urged to contact indoor air quality experts.

GlobeSpec can arrange, for an additional cost, to have professionals conduct actual testing if needed for any specific indoor air pollutant.

Information on Indoor Air Quality can be obtained from the federal Environmental Protection Agency (EPA).
