DESIGN SUMMARY

Effluent from one 500 gallon tank will flow to a Whitewater DF 50 aerobic treatment plant, through a Whitewater tablet chlorinator to a 500 gallon pump tank. A Gould 10 EJ or equivalent, 1/2 HP pump discharges the "Class I" effluent to the surface through 4 Rainbird sprinkler heads. Spray area shall be graded and if necessary, swales installed to provide positive drainage away from the spray area to prevent ponding or pooling. The land owner shall be responsible to have the area sodded or have grass growth before use. Equipment specified in this design may be substituted for equipment of equivalent specifications

SPRAYFIELD CALCULATIONS

A 3 bedroom residence rated at 300 gallons/day, the flow is reduced by 20% due to the use of low flow devices which lowers the daily flow to 240 gallons/day divided by the sewerage application rate (.041 gallons/foot, squared equals the required area of 5854 sq. ft.). The sprayfield is designed at 6077 sq. ft.
