Scale and location of all landmarks is approximate.

Each numbered square is one mile by one mile. When you reach the point with the red X, you are 15 miles south of Van Horn and at this point you should switch to the Gov't. map. Of the two maps, the larger map is the more accurate.

The south half of the ranch, where your property is, is closer to the mountains, so it is more scenic and has a water table. All water wells and springs are encircled in red.
