16.3.1

The countertop edge will enhance the style of any project by adding an architectural detail to the kitchen or bathroom. Standard profiles such as the "Double Eased" and "Bullnose" are timeless choices that will coordinate with most styles. More decorative profiles such as "Ogee" and "Dupont" gives a refined look perfect for classic or traditional spaces.

Maestro Marble only available in Double Eased

Castlerock Homes

This work order represents finished items which I have selected and ordered to be incorporated in my home construction.
I understand that all materials are pre-ordered and any changes, if allowed, will incur a \$250.00 CHANGE ORDER FEE per visit made payable to Castlerock Homes and \$150.00 per hour Design Fee made payable to Design Gallery.
I understand that the shade variation can and may occur in every material. Buyer
I also realize that Castlerock Homes / Design Gallery has no control over back ordered or discontinued items and there is a possibility that any items may have to be re-selected if not available for installation. Buyer Initial/s
I have read and carefully checked each item, color and number on this sheet and agree that they are to my specifications. Buyer Initial/s
Monies not collected at time of sign off of these completed selection sheets for additional options/ products not included in original Sales Contract Price are the sole financial responsibility of this homebuyer and must be paid for prior to installation or product(s) will not be installed. Checklist

For Residential Natural Stone, Maestro Marble and Quartz Countertops

the sample shown to you at the time of your selection serves only to indicate a general way the color, pattern, and texture are found in this color of stone and may vary from the slab countertops installed in your home. This variation should be expected. Your countertops will not be replaced due to variation from the samples.

Stone's Natural Beauty – Know What To Expect. You will probably notice small hairline veins, which are called "fissures". There will also be irregular mineral concentrations of color that vary in size. These are called "inclusions". Inclusions might be fairly circular in nature or they might appear to run through a portion of the countertop in somewhat of a straight line. Some stone slabs contain extremely tiny holes called "pits" which are too minute to be able to be filled by resin at the factory. In addition, some slabs contain "fill". Fill is essentially the combination of material and resin a polishing factory uses to fill a hole in the slab that is larger than a pit. Please be aware that fissures, inclusions, pits, and fill are all considered part of the distinctive and unique beauty of natural stone. Your countertops will not be replaced due to any of these features. Maestro Morble and Maestro Quartz may contain part or all of these same characteristics as they are made from natural stone components.

Marble and travertine are especially likely to have pits, significant veining and fill. Also, honed finishes will not feel as smooth as that of a polished granite countertop. Maestro Marble may contain these same characteristics as they are made from natural stone components.

No two pieces of stone, such as the pieces that make up a kitchen countertop, will be identical. The countertops or pieces within the countertop will not be replaced due to color, pattern or texture variation. Please note, for "high movement" stones, significant pattern variation may occur where pieces are seamed together. Maestro Marble and Maestro Quartz may contain these same characteristics as they are made from natural stone components.

To clean Natural Stone, Maestro Marble or Maestro Quartz countertops, a damp cloth or paper towel is usually all you need. Use natural stone cleaners for everyday cleaning. If natural stone cleaners are not used, we recommend using ammonia free, non-acidic and P.H. balanced cleansers, diluted with water to clean the surface(s). Clean up spills as soon as possible.

Your new Natural Stone and Maestro Marble countertops have been treated with an impregnating sealer, which helps reduce the risk of the countertops from staining. Be aware that sealing will not eliminate staining. Any spills should be wiped off immediately to prevent stains from settling into the stone. It is recommended that an impregnating sealer be reapplied once a year for the countertops to resist stains and maintain its repellant characteristics. Highly acidic substances such as orange Juice, coffee, vinegar, wine, mustard and many soft drinks can "etch" marble, limestone, travertine, Maestro Marble and even some granite which will leave a dull mark. General cleaners not specifically designed for natural stone are not recommended. These may etch away the poish, discolor the surface, scratch the stone or degrade the sealer. There is no warranty against stains or etch marks. Request a copy of Natural Stone Maintenance Guide for more information on how to take care of your countertops.

All countertop seams and lamination lines are visible and can be felt. Seams will be placed where necessary based on countertop layout and material size constraints. Even for the same plan, seam locations may vary due to slab size. Seams may vary in width and height from 1/16" to 1/8" depending upon installation requirements. There may also be minor "flakes" at seam joints due to the crystal composition of the material.

Tiles and countertops may not match in color since they were processed at a different time period.

All slabs for countertops comes in various sizes. Slab sizes of the same color vary from shipment to shipment. Hence, for large islands, in some cases a seam is required and in others a seam is not required.

 Λ All countertop thickness can vary up to 1/8" due to the manufacturing process.

By signing below, Purchaser acknowledges that they have read and understand the above information.

BUYER'S NAME CHRISTOPHER HILLIARD

ADDRESS 16315 DENISE TERRACE DR- STONECREEK RANCH

BRICK

Brick materials will vary by "run" creating variances in the overall appearance of the brick. Please understand that the brick on your home will not look exactly like any other home with the same selection.

STUCCO

Due to the nature of color reproduction, the colors on the sample card may vary from actual colors. The finished product can vary slightly in texture and color due to varying application techniques by tradesmen and natural aggregates used in the product.

STONE

The stone that is used on facades is a replica of natural stone quarried from different locations throughout the country. Different areas in the quarry yield variations in colors and veining. Therefore, some variations from the selection sample are to be expected.

CERAMIC TILE

Dark colored ceramic tiles are not recommended for flat surface use, for example on countertops, center islands, wet bar areas, etc. The color is baked on the surface and does not continue through the thickness of the tile. When scratched or chipped, the light surface below the color will show. Dye lot variances may occur in shade and veining, and no two pieces of tile are ever exactly alike. When choosing "natural" looking floor tile, please be aware that these selections are manufactured to look like natural stone and therefore, individual pieces will differ in color, texture, and overall appearance and can not be expected to match samples exactly. Dark or light bodied tiles that do not have matching trim pieces will have a significant color difference on the exposed edge as compared to the face of the tile when installed on shower walls, countertops, backsplashes, etc. Be aware this will occur and check the body color of the tile to avoid any misconception.

ACCENT TILES

Some accent patterns may be interrupted by plugs or switches in kitchen and desk areas. Please be aware of this while selecting your pattern. Due to the nature of the craftsmanship of decorative listellos, inserts, metallic finishes, and mesh mounted mosaics; no two pieces will be identical in shape, size, and / or color adding beauty and uniqueness to the product. Mesh mounted mosaics come manufactured on a sheet of mesh, which can have irregularities in placement of the tiles. When grouted, the grout lines will also have irregularities corresponding with the layout of the pieces on the sheet. The flexible nature of the mesh mounted tiles requires them to conform to every nuance of the underlying surface. Therefore, given the characteristics of the material, the installation of such materials may result in a surface that is not perfectly flat and/ or even.

GROUT

Over a period of time, grout may stain or discolor. There are several products available at local hardware stores to treat this condition. Builders do not warrant discoloration and will not seal the grout. No grout sealant should be applied until at least six weeks after the tile installation. Grout color samples shown are as near the actual color of the grout as possible. Final installed shade may vary with the variety of tiles, tile porosity, job site conditions, and finishing techniques. Uneven drying conditions can cause shade variations or mottling within the same installation. Shade variation will vary from the sample stick used for color selection. Settling of concrete or movement of non-rigid surfaces may cause grout to crack. These are normal conditions. After one year of ownership, re-grouting is considered to be a part of homeowner maintenance. Should they occur in the first year, the repair will be warranted.

Initials_

ADDITIONAL TILE & GROUT

There is a possibility tile dye lots and surfacing will vary when adding additional tile to preexisting installation. In addition, grout color will vary and grout lines will usually not line up with existing grout joints.

MARBLE/SLATE/LIMESTONE/GRANITE/ TRAVERTINE/ NATURAL ACCENTS

These products are natural products that are often streaked with irregular and colorful patterns of "impurities" during formation. Because of the imprecise nature of the natural formation, no two pieces of the same type are ever identical. In making your selection, please bear in mind that our samples are merely representative of the color and markings and that the product installed in your home may not resemble the sample. Color and veining can vary dramatically, so you should expect to find variations among the pieces used in your own flooring. Additionally, these products are relatively soft and porous and may scratch easily. Marble should be professionally polished at 2-3 year intervals to restore its original luster. Builders are not responsible for color/veining variations within the tiles from tile to tile, or from slab to slab. Slab granite used on countertops should be sealed annually. Your builder does not seal your countertop surface. Sealants for granite countertops are available at your local home improvement stores. Tumbled Marble is not filled. When grouted all holes in the stone will be filled with grout.

LAMINATE

Scratches are more visible on dark and glossy laminate colors than light and satin colors and finishes. Builders do not warrant scratches in dark colored laminates. Knives should never be used on an unprotected laminate top. Do not place hot pots or pans directly on the laminate. Glossy tops are discouraged.

PAINT

When choosing paint colors from a fan deck, please expect a color variation when it is applied to a large surface. Our designers can assist you in choosing colors that we have used successfully on other homes. Darker paint colors generally require two (2) coats of paint. To determine if the paint color selection you have made will be to your satisfaction, you may consider buying a quart of the paint and applying to a section of the wall before the room is painted. Your paint company/builder/designer cannot guarantee an exact match when colors are chosen from a fan deck.

CABINETS

While every effort is made to match wood grain as closely as possible, no two pieces of wood are exactly alike, even from the same tree. These differences in natural color and grain mean that each piece used in the construction of the cabinet will vary from door to door. Stain-grade wood that is painted will show the natural graining in the wood thus not having as smooth a finish as paint-grade wood or MDF board.

STAINED WOOD PRODUCTS

Different species of wood are used to construct different components, i.e. cabinets, handrails, wood floors, etc., in your home. Because of the variation of the grain, density, and natural color of the different species of wood, builders can not guarantee an exact stain color match from one component to another. However, exposure to sunlight, smoke, and chemicals may cause some materials to fade or vary from their original color every time.

VINYL FLOORS

No matter which vinyl you choose, under extreme conditions, sheet vinyl can dent or tear. Damaged or stiletto heels can also dent or scratch your floor. Damage of this nature is not covered by warranty. The place of walk off mats at each entryway will help to collect dirt and grit that might be tracked in. These tiny particles act like sandpaper and will scratch your floor. Be sure to avoid using rubber-backed mats or rugs as they can damage and potentially discolor your floor. Instead use mats made especially for sheet vinyl floors and remember to shake them out regularly. Also, take great precaution when moving heavy furniture or appliances. The use plywood sheets when moving objects will protect your floor. Always cover table and chair legs with protectors designed to safeguard vinyl. Be aware that homeowners are responsible to maintain caulking in heavy water use areas.

WOOD FLOORS

Builders strongly discourage choosing wood floors for "wet areas", such as kitchens, utility rooms, and baths. Care and maintenance of glue-down wood floors is similar and is addressed under sand/finish wood floors.

SAND & FINISH WOOD FLOORS

Wood performs best when your home has a relative humidity between 30-50% and a temperature range between 60-80 degrees Fahrenheit. When floors dry out, they shrink slightly. When floors absorb humidity they expand. This is normally a seasonal change.

Any changes to the wood, which may include minor cupping, crowning, or cracks, are not considered a problem or defect in the floor, only nature's way of managing too much or too little moisture. Never completely shut up your house without the H.V.A.C. being on to regulate temperature, which in turn affects humidity. Although very durable, hardwood floors can be dented. Damaged or spiked heels are capable of damaging virtually any flooring surface.

Normal maintenance includes vacuuming or sweeping as needed. Make sure the beater bar does not contact the floor. Do not use products such as Endust or Pledge to dust mop your floor. An electro-static sheet such as a "Swiffer" or equivalent works well at picking up dust, lint, hair, etc. Use only the dry version, not the wet one. Use only cleaners approved for use on urethane finished hardwood floors, such as Bona Hardwood Floor Cleaner, Polycare Spray Cleaner, or Zep Hardwood Floor Cleaner. These products are available at your local home improvement store. A hardwood flooring mop with terry cloth bonnets works well. Remember don't over-do wet maintenance on your hardwood floors. Many characteristics are enhanced once a floor is sanded and finished. You will notice numerous shades of colors, textures, burls, and figures in the grain. The wear surface or finish is a urethane coating that protects and also enhances the natural beauty of your hardwood floor. The finish is applied in several different applications. As with any material that is applied in a liquid state, occasional small bubbles or small debris are unavoidable. Special care is always taken in this area, but unexpected foot traffic in other areas of the home can sometime stir up airborne materials prior to the finish hardening completely.

CARPET

All carpeting, especially light colored carpeting, will experience filtration soiling. This condition, which is caused by airborne soil and pollutants which are "filtered" through the carpet in areas where airflow is concentrated, may appear over a short period of time (a few weeks) or may take months or years to become visible. Filtration soiling is most noticeable with light colored carpet which appears soiled and dark at doorways, along seams that abut baseboards, around railings on stairs, around electronic equipment, areas where the carpet has been punctured or anywhere that air flows over or though the pile. Filtration soiling does not indicate a defect in the carpet nor is it an indication of low quality. It can appear on any carpet regardless of price, style, color, construction, or face fiber. This construction is considered "normal wear and tear" and therefore is not warranted.

BERBER CARPET

Because of the nature of Berber carpet, seams are more noticeable. All Berber carpets perform best with a 3/8" carpet pad. If you are using a vacuum with the beater bar it is highly recommended to raise the bar to its highest point to prevent damaging the loops and to prevent snagging and fuzzing of the seams. To prevent these complications from occurring you can remove the beater bar or you can use a canister type vacuum.

STAPLE CUT PILE CARPET

Shedding is a natural and expected characteristic of staple cut pile carpets. Some of the staple fibers that do not get anchored in the backing are floating loose in the pile until they are removed. The time-span that shedding occurs is dependent upon the frequency and thoroughness of vacuuming, the type of properly operating vacuum, and the amount of foot traffic. Most shedding will subside within several months to the first year of use. It is best if you change your vacuum bag every time you vacuum or it will have the potential to burn up the motor.
