Subject: Review of Foundation Repairs at 1122 W. Belgrave, Pearland, Texas 77584

BEC Engineering, Inc. (BEC) has reviewed the subject foundation repairs that were made to the above referenced residence in March 2004. Atlas Foundation Repair presented the repaired portion of the foundation using 24 segmental pre-cast Cable Lock™ concrete piles beneath the above referenced location for BEC's review. The pile locations and spacing were found to be in general compliance with industry standards, and generally in accordance with Atlas Foundation Repair's proposal.

In BEC's opinion, the piling depths in conjunction with the pile driving force as reported are adequate for this type of structure and for the area where the work is being performed. Based on the information provided the areas where the new pilings were installed under the foundation are now more level than previously recorded prior to the re-leveling work. The repair work performed to the subject location is believed to have been acceptably completed in accordance with good industry practice for foundation pile installation work. The repairs as performed on the subject location should stabilize the foundation movement observed prior to the foundation repair work. A foundation maintenance program is recommended which can be found at [www.foundationperformance.org](http://www.foundationperformance.org).

The future performance of the foundation system on the subject location should be as intended, provided proper soil moisture is maintained and there is not a loss in the load bearing capacity of the soil beneath the foundation. Soils should be graded such that there is positive drainage away from the foundation to prevent water from ponding around the foundation slab.

BEC appreciates being of service. If you have any questions or require additional information please contact the undersigned.

Regards,

Karl Breckon, P.E.  
BEC Engineering, Inc.
