The Home Energy Rating Standards Index/HERS Index

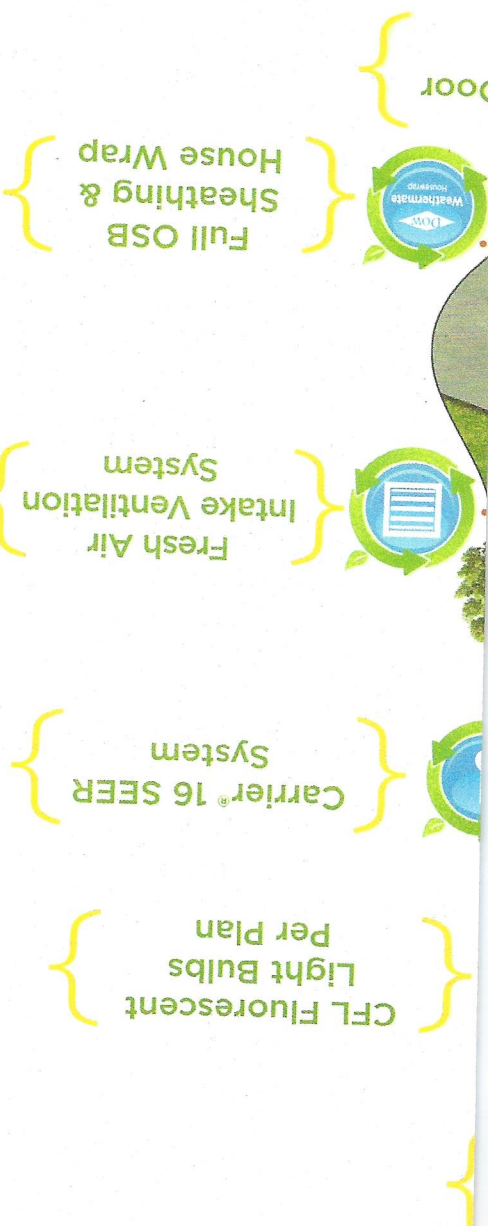

Want to know the HERS Index for your home? Go to mihomes.com/wholehome. There's a HERS calculator that will estimate a rating for your home.

Lower Energy Bills

High M/I Building Standards, Equals Lower Houston Energy Bills

You really shouldn't buy a home without knowing its Home Energy Rating System (HERS) index. Every home should have one, and EVERY M/I HOME DOES. HERS testing measures the quality of a home's insulation, ventilation, "tightness," and the efficiency of the heating and cooling system. M/I has every home independently tested twice by a third-party rater to determine the HERS score - the lower the score, the better. It's simple math - our index beats a resale home standard index and you can save up to 30% on your energy bills.

*The 62 HERS Index shown is based on a rolling 18-month average of all M/I homes built in Houston. The average HERS Index is subject to change without notice.

every home we build. comfort level up all year-round.
