## **Smart Home Automation Overview**

A Samsung Galaxy Tab A8 tablet is included with the house. This tablet, as well as the new owner's devices, can be used for all home automation and to control items. An email account has been created for the house [7407knollcliffct@gmail.com](mailto:7407knollcliffct@gmail.com) and all home automation accounts have been linked to this email. The WiFi Router and Extender are included with house. All account ownership will transfer upon sale.

This tablet can be used to view and control the following home automation devices:

- CURB Home Energy Monitor
- Nest Thermostats, Hello Doorbell, Outside Camera, and Smoke/CO Alarms
- Wink Home Automation Controller for switches, dimmers, lights, and ceiling fans
- Rachio Smart Sprinkler System
- EyeOnWater digital water meter
- Notion Leak Detector
- myQ Smart Garage Door Openers

All devices support control via Amazon Alexa, Google Home, If This Then That, etc..

Now

you are consuming

526 watts of energy.

The Curb Pro energy monitoring system is installed on the house breaker panel and monitors 16 individual channels to enable the homeowner to see exactly where power is used and how much it costs. This system also easily supports integration of solar panels, a generator, or a battery system to allow the homeowner to monitor power generated as well as consumed. There is an app to monitor as well as a webpage view with more in-depth details and historical usage data.

Detailed information of home power usage allows the homeowner to easily track what is on and, with the other smart home devices, control power used in order to save money. Previous owner estimates at least a 30% saving on the power bills due to this.

As well, the system provides the proof of summer energy consumption. The home has rarely used over 2000 kWh, and with added insulation, low-e double pane windows, and a new AC system, the real time data shows summer power consumption to be around 1500 kWh on average. With current energy prices, expect less than \$200 energy bills in the summer.

View of historical energy usage, note the peaks of when the AC systems are running. System also can project power usage costs.

View of wattage being consumed for individual circuits at the breaker panel.

myQ can be used to open and close garage doors remotely in addition to traditional garage door opener remotes. MyQ can be setup for home automation tasks, for example, to turn on lights when you arrive.

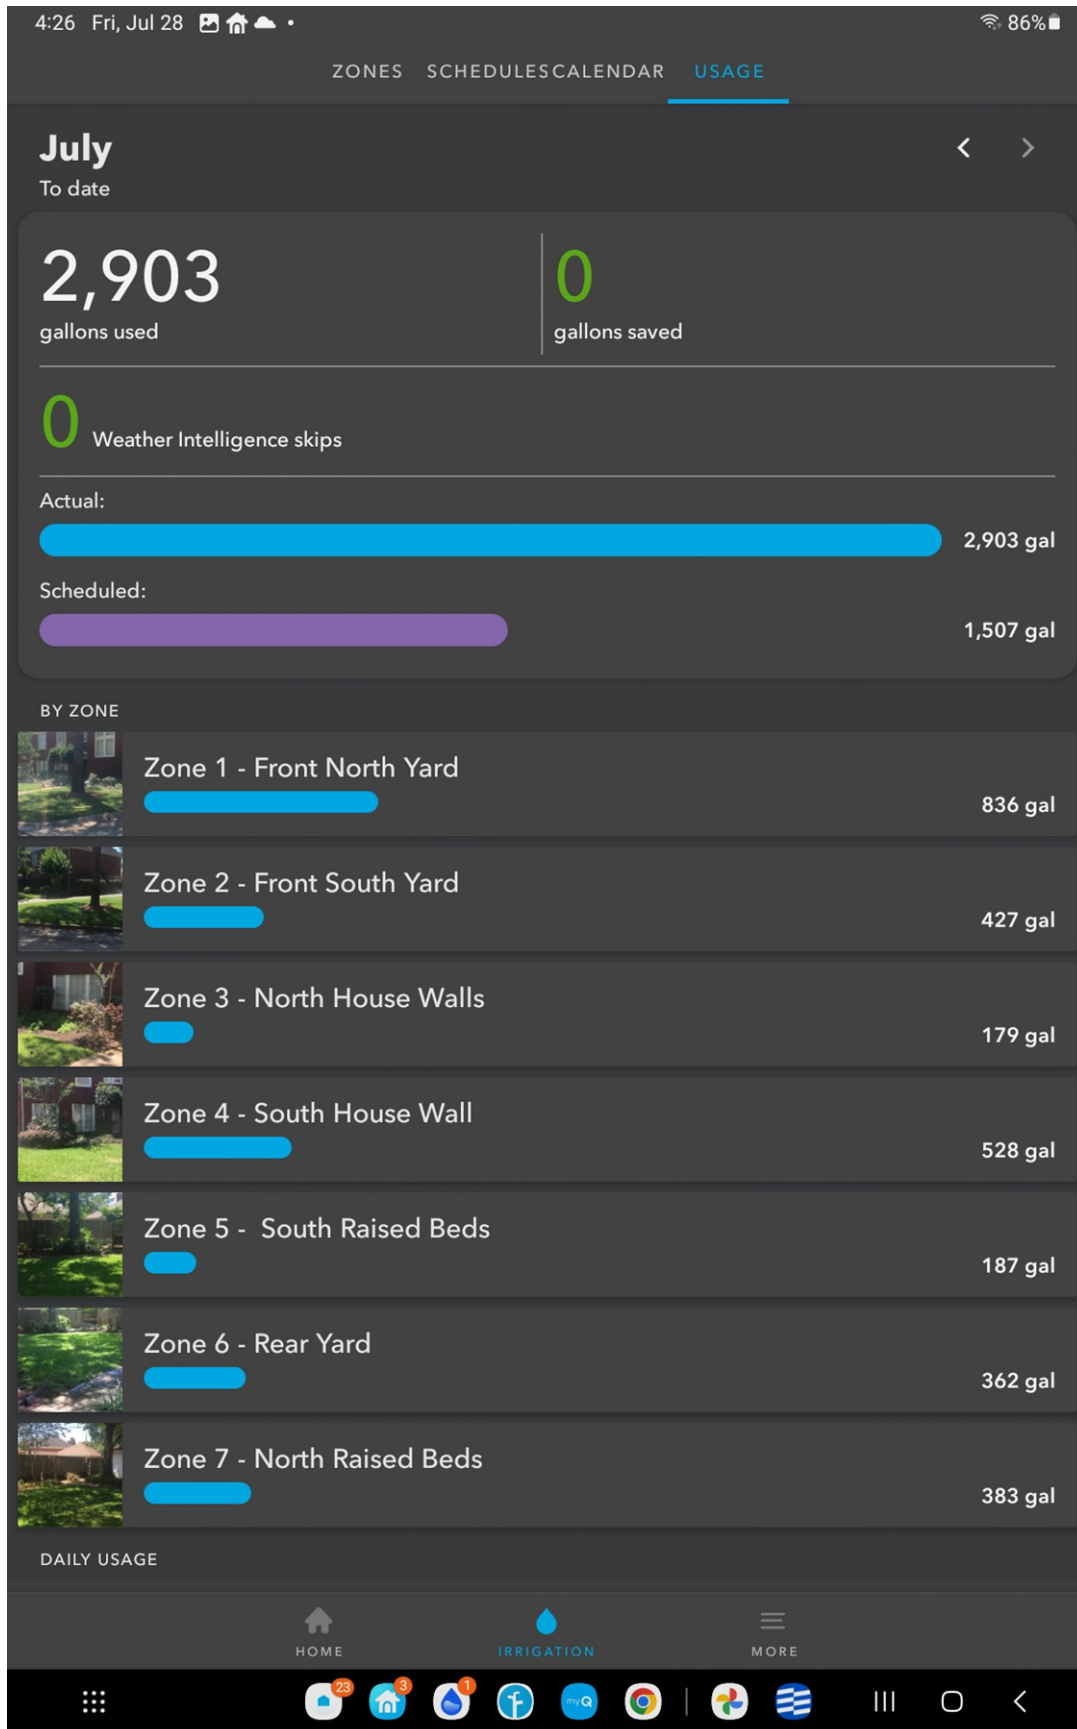

A Rachio smart sprinkler controller is included with the house. This controller automates 7 independent zones outside the house for watering. Based on weather, soil type, plant type, and sprinklers used, it predicts soil moisture and automatically schedules watering when appropriate.

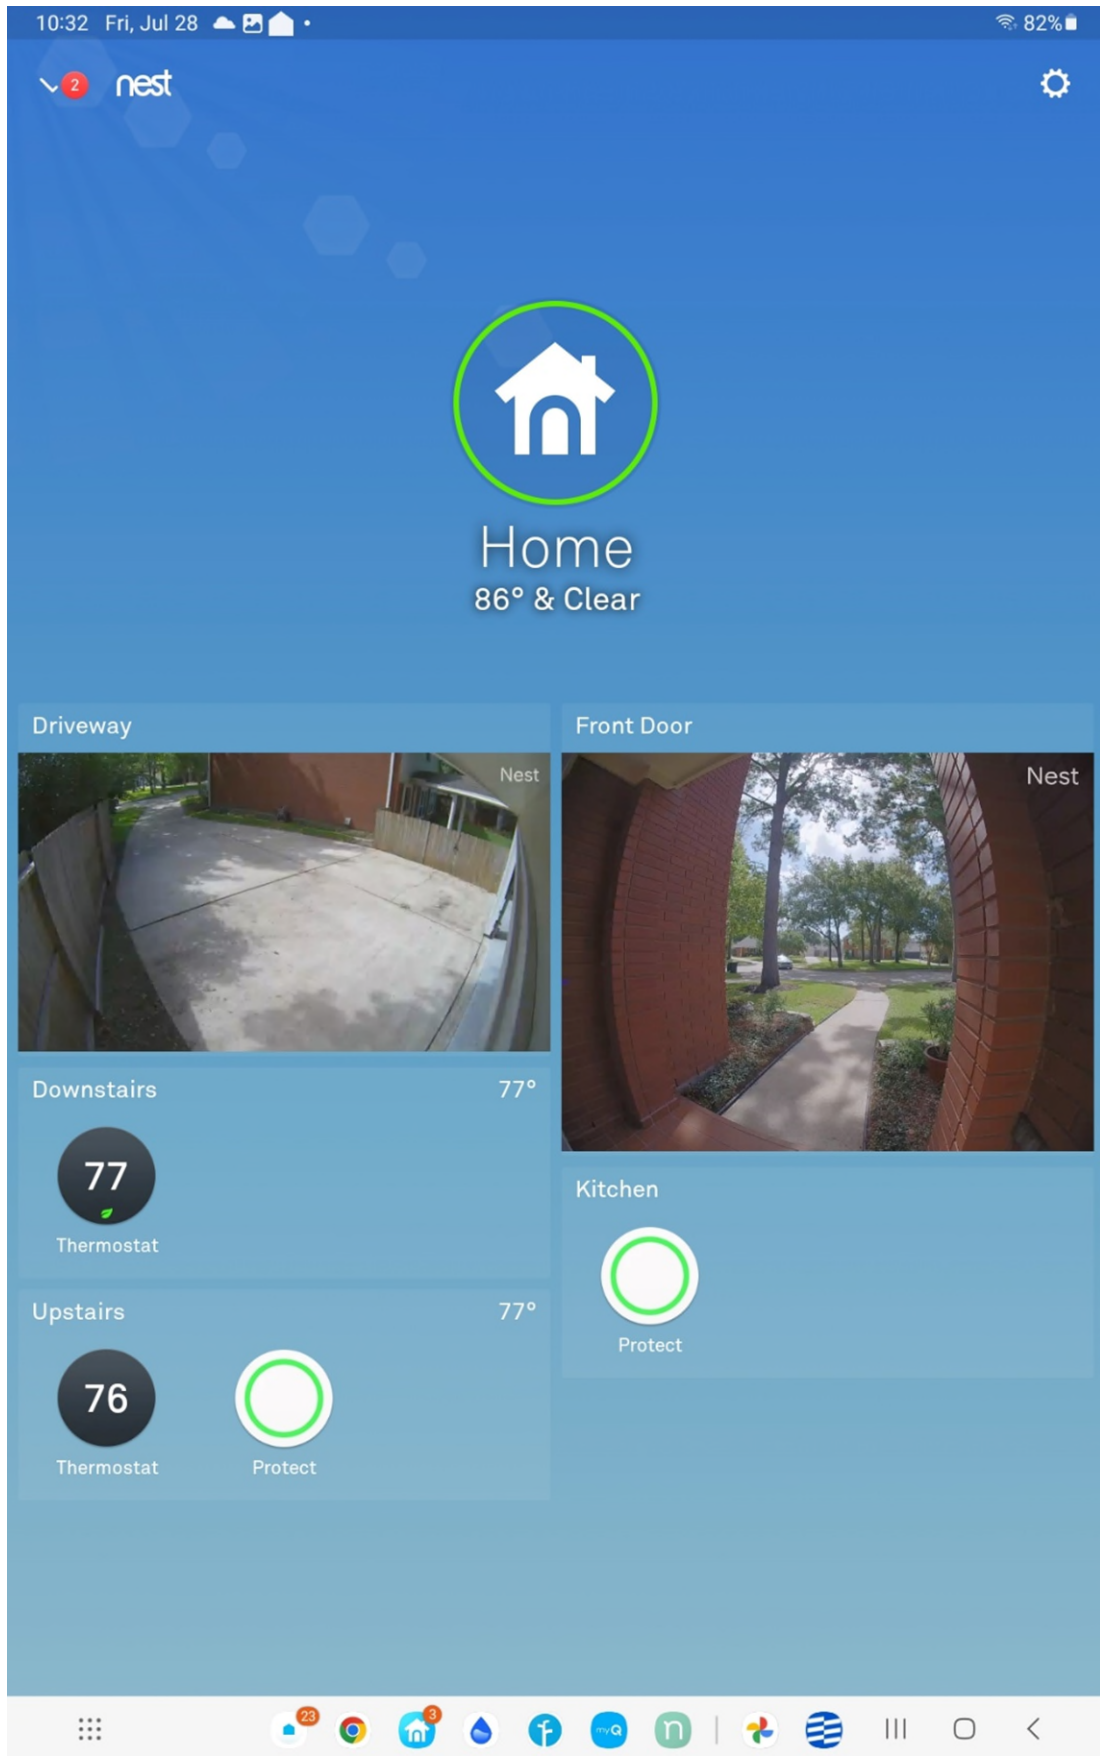

Rachio calendar view of when waterings are scheduled. Calendar automatically updates based on weather conditions or user-initiated waterings.

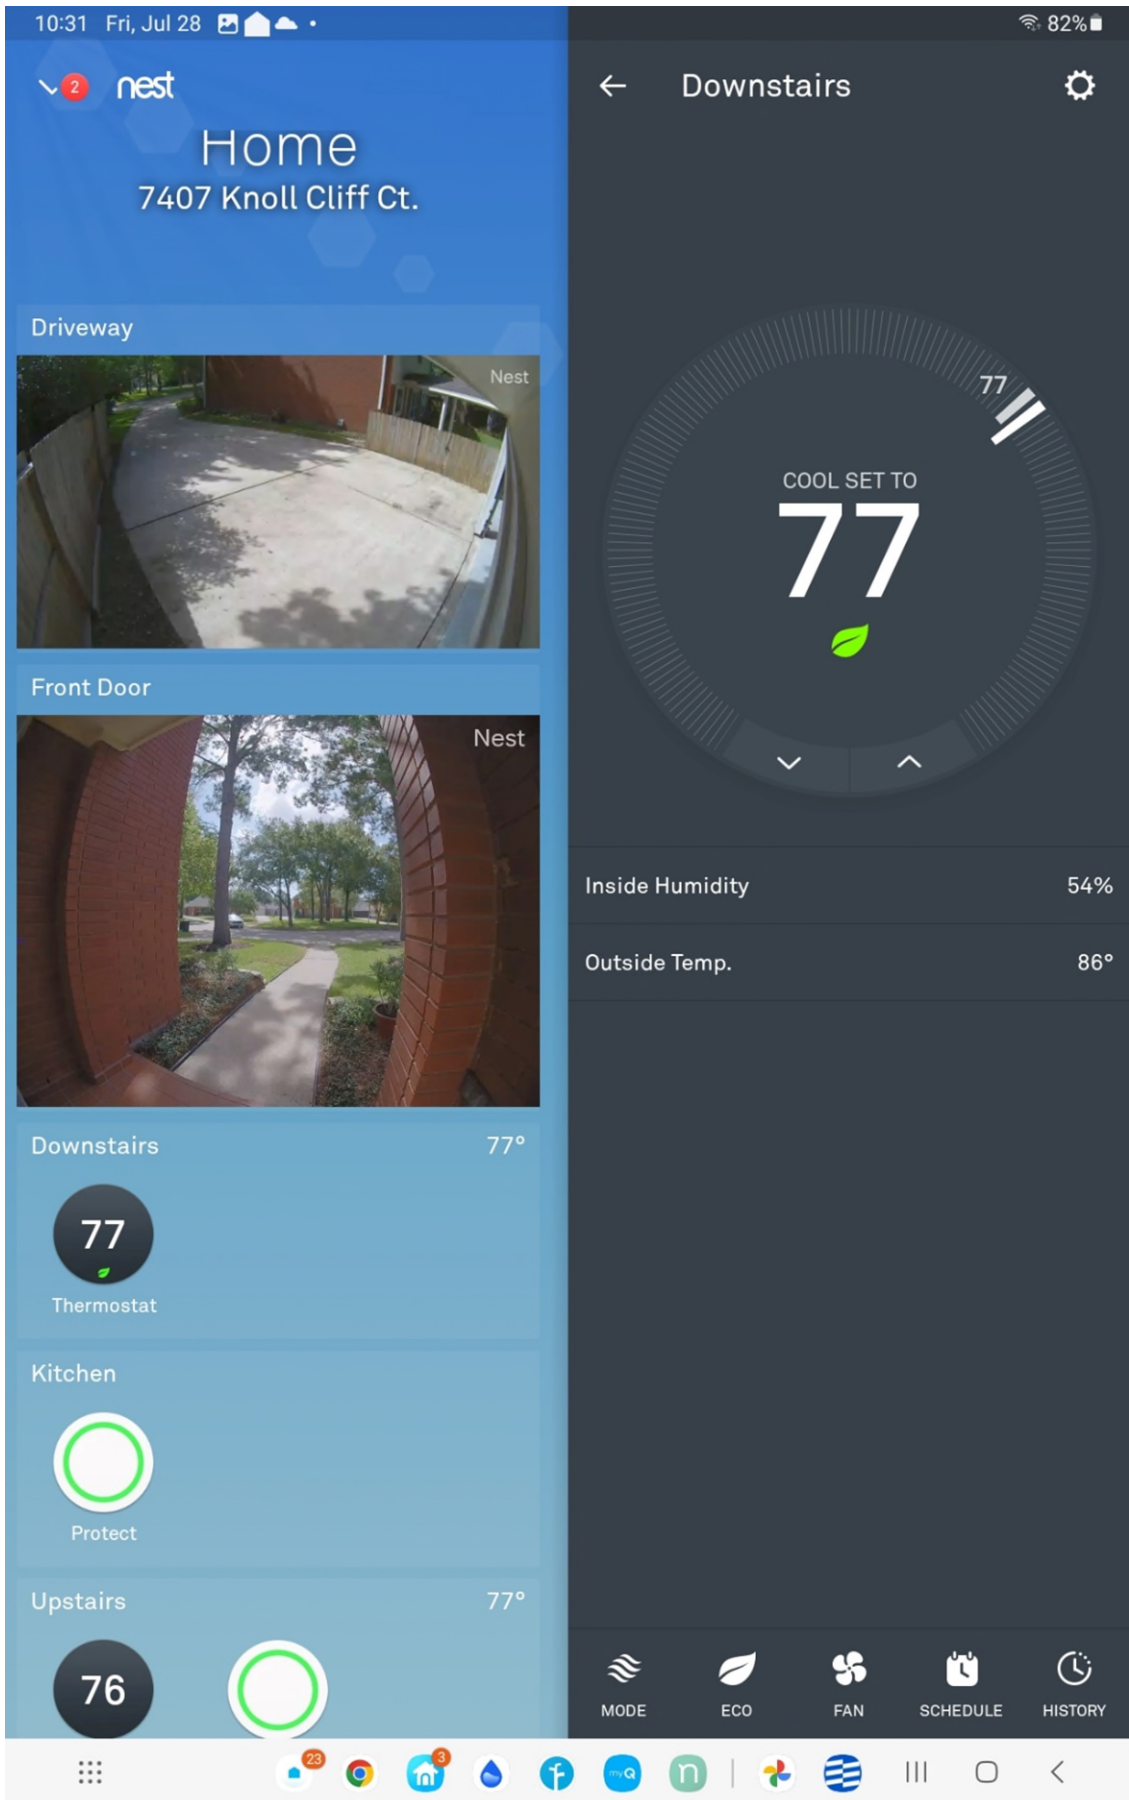

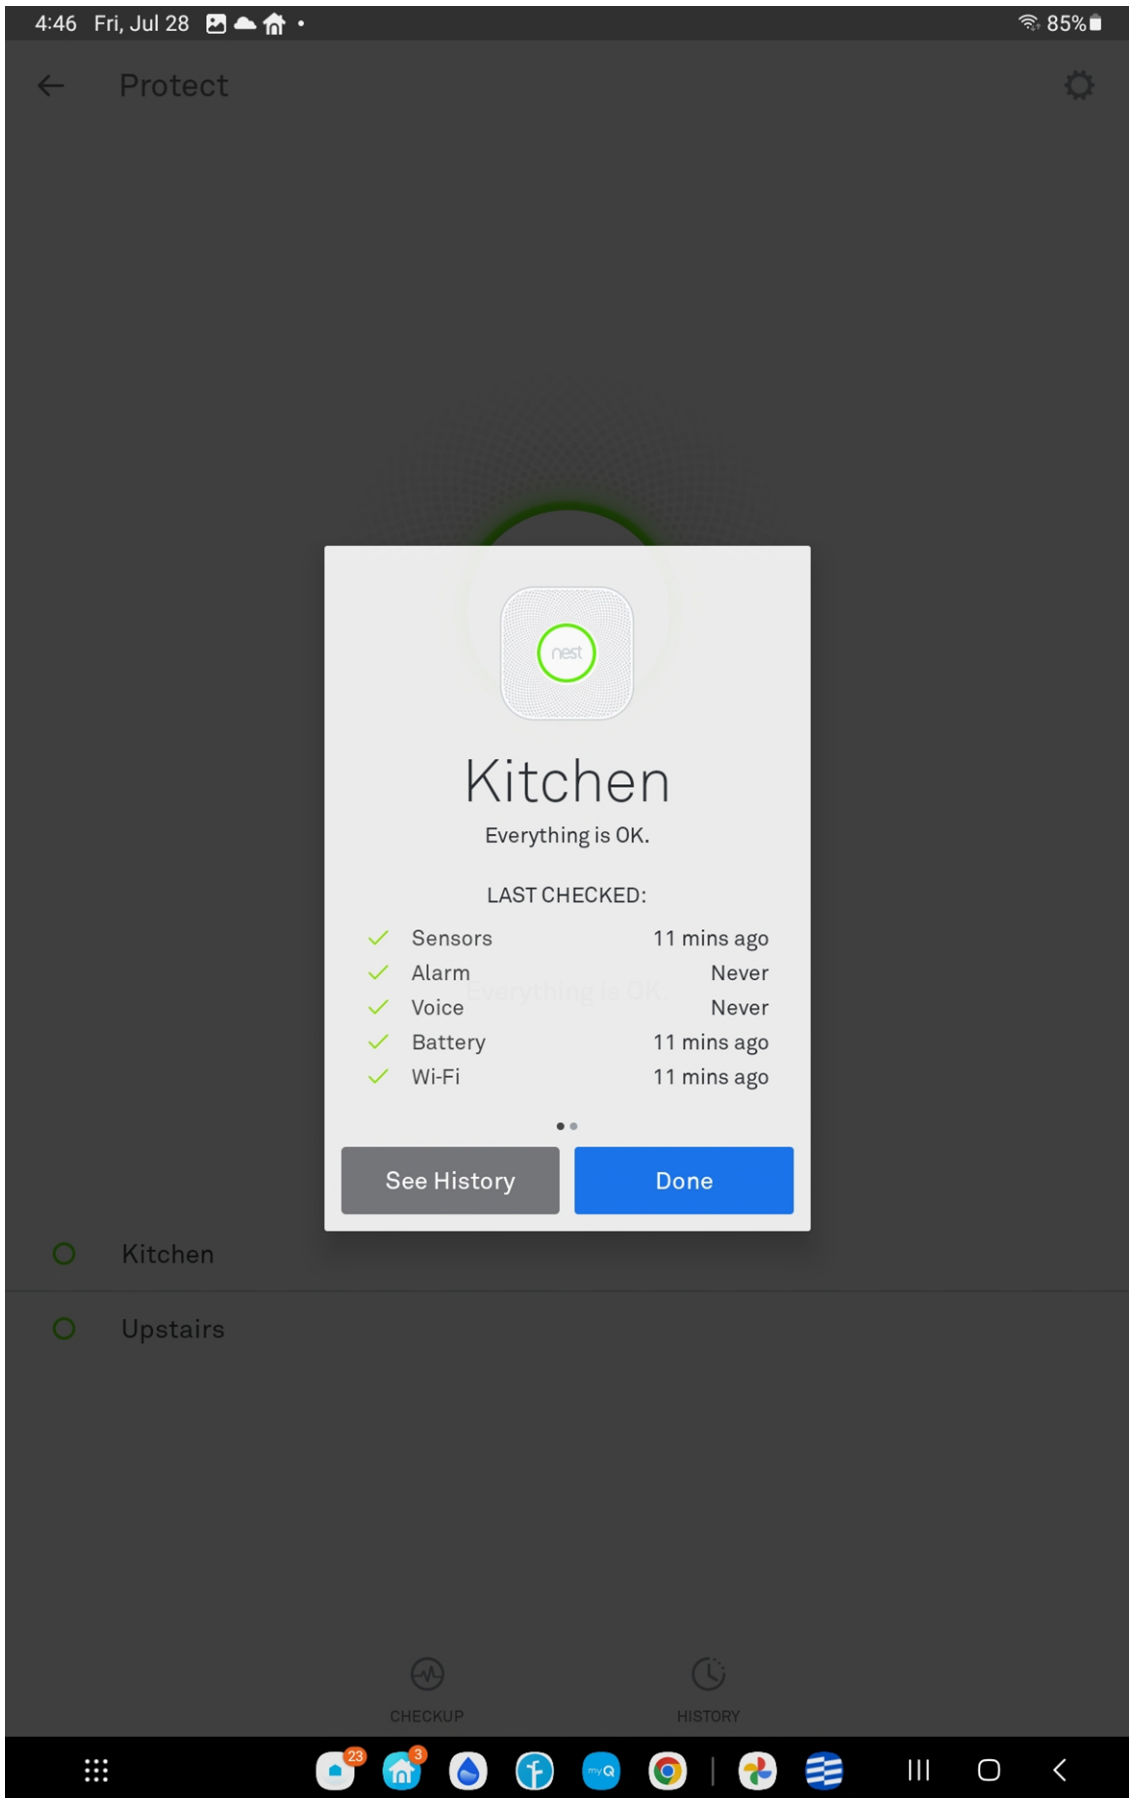

Rachio also provides the homeowner with a usage report of waterings based on duration and sprinkler type.

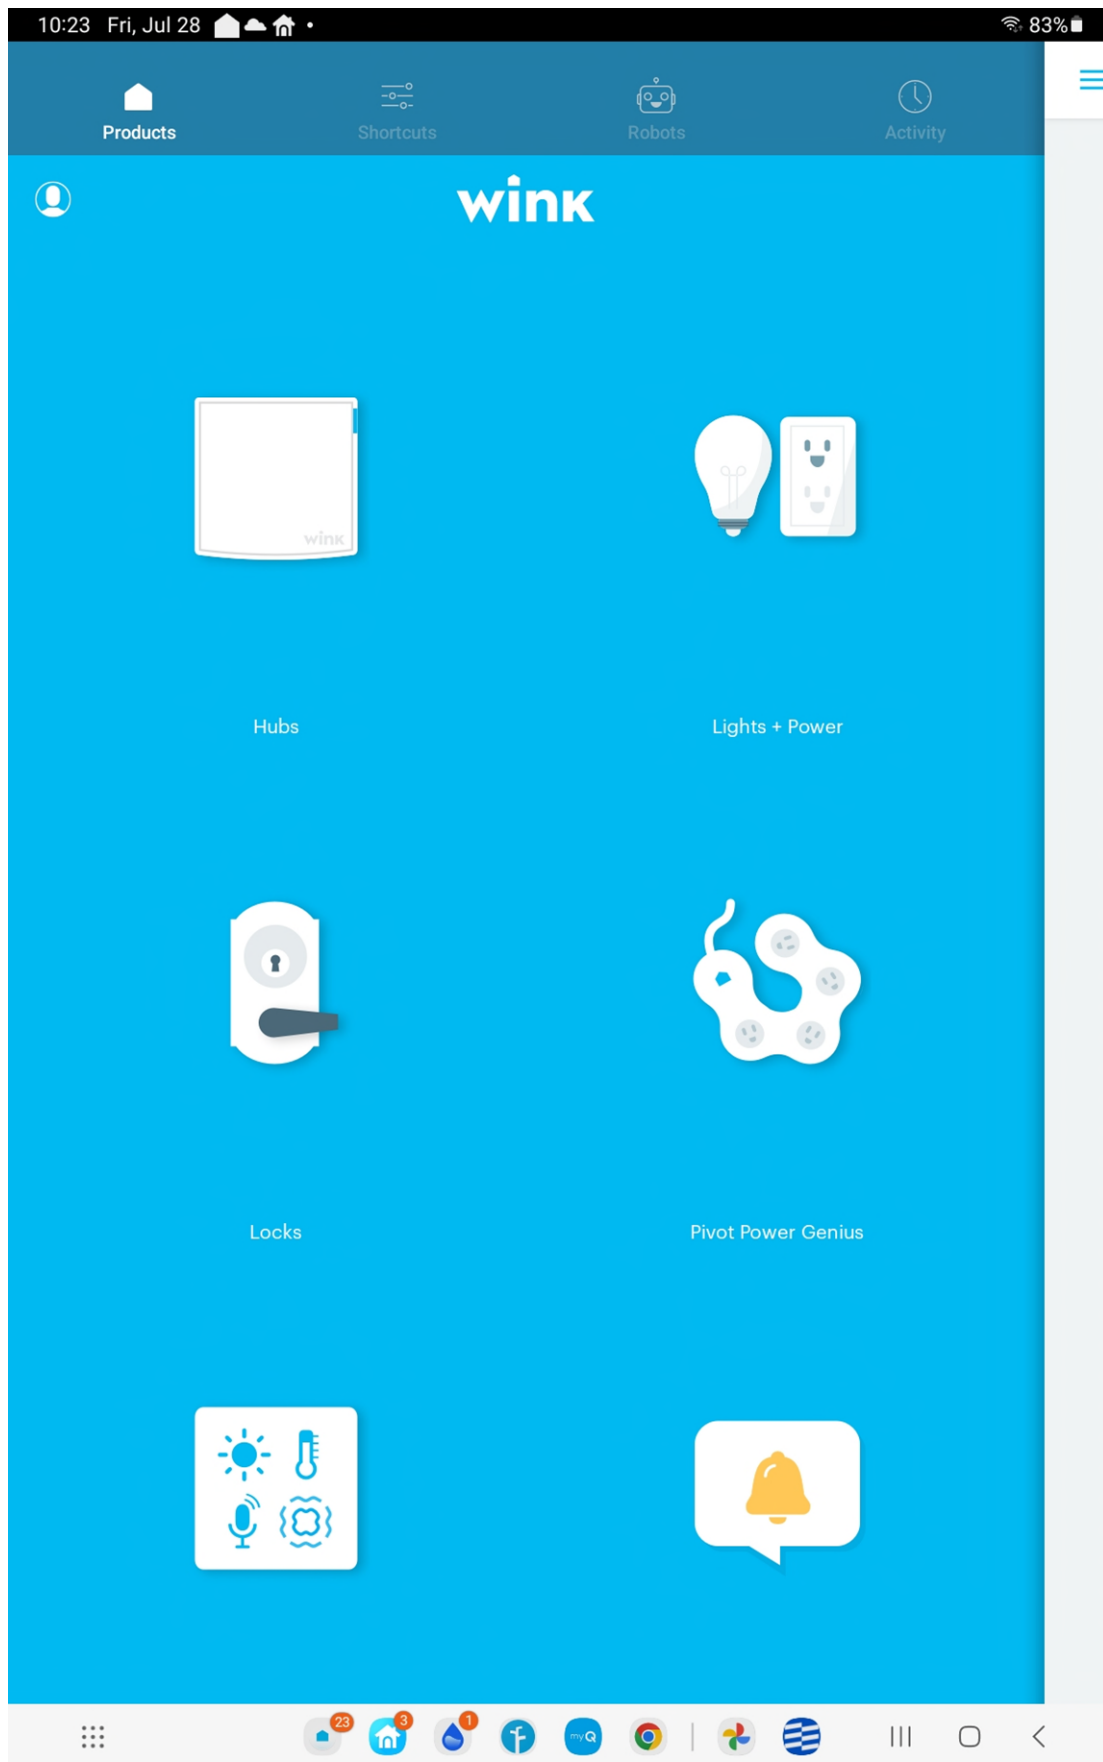

Google Nest is used to control thermostats, view Nest Hello front doorbell, and monitor smoke and carbon monoxide detectors.

The main water meter into the house was recently updated by the MUD to a digital meter to allow the homeowner to monitor water consumption. The EyeOnWater App allows the homeowner to see real time consumption and if there are any leaks to report.

 No leaks detected, good job!

 Weekly Usage Insight  
This week you used **2,770** fewer Gallons than last week.
