Inspection Report

Reference No.: HA1110

Date: 11/27/2020

Structural Inspection of the residence located at:

3618 Vacanti Dr Richmond, TX 77406

REMARKS:

Please note that these reports are outcome of visual inspection of the house and states the condition of house at the time of the inspection. The inspections do not cover wood rot, sidings, painting, windows, inspections not ordered, and items that cannot be visually inspected. This property was not inspected for health-related molds, fungi or environmental concerns. We are not qualified, authorized or licensed to inspect for molds, fungi or environmental concerns. These inspection reports do not guarantee the state of the house in the future. All items may not be noted in the report, only those sufficient to describe the general condition of the house at the time of the inspection. Inspector's total liability due to errors and omissions is limited and is not to exceed the inspection fee.

JOB SUMMARY:

On Thursday, Nov 04, 2020, I made an engineering inspection of the residence at the above location per owner's request. The purpose of the inspection was to detect any defects that might exist, discuss apparent causes of the damage, and make recommendations for repair, as necessary. Please note that all observations and recommendations are strictly my professional opinion and may differ from those of other professionals.

FOUNDATION INSPECTION:

Foundation problems are usually identified by some signs in houses, and below are observation results of those signs for the subject property:

- 1- **Cracks on walls:** There are minor thermal cracks observed on the exterior wall corners which is not due to foundation settlement and can be filled with proper material match with existing fillers.
- 2- **Cracks around window frames or exterior doors:** There is not any crack around entrance door and window of the house.
- 3- **Sticking doors or windows:** All other doors and windows open and close properly and gaps between doors and frames have not deformed.
- 4- **Foundation cracks:** There is a crack observed on the garage foundation concrete and couple of cracks at ceramic of the house which shown on the below picture in red. Location of the cracks is sign of the foundation settlement at the south east of the main building and north west of car garage building.

Nabavi.hamed@gmail.com

5- **Uneven floor:** Floor is not even over the whole house and south part of the house has more un-even surface.

6- **Drainage:** NA

7- **Miscellaneous:** There is a foundation crack at exterior south east of the garage building which is sign of lack of vibration during concrete pour or rebar placement. This is not a structural issue and can be fixed with proper grout.

OTHER OBSERVATIONS:

There are few minor thermal cracks on exterior walls which is normal cracks and need to be filed with proper fillers matched with existing materials.

CONCLUSIONS:

Based on my observations, building has experienced foundation local movement which caused cracks. However, the foundation and structural integrity condition is normal at the time of inspection. Since all the foundation movement sign is limited to small portion (As shown above) of the building and may occur due to underground water level change or lack of concrete piers, these are the most probable reasons for the structure and foundation problems on that area.

RECOMMENDATIONS:

The cracks on the brick walls are to be sealed to prevent water intrusion and potential damage due to rain.

Foundation contractor shall fix the foundation level by adding proper piles. At least once a year, the client should carefully inspect the foundation (interior elements and exterior elements) for signs of cracking, insect intrusion, moisture intrusion, or changes of any type (such as the appearance of cracks, or the widening or lengthening of existing cracks).

If you have any questions, please do not hesitate to contact me.

Sincerely,

S. Hamed Nabavi Razavi, PE
